DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hartai (USPN 5,041,762) in view of Opitz et al. (USPN 5,744,233) hereinafter "Opitz".

In regard to claims 1-5, the Hartai reference discloses a low-pressure discharge lamp (Column 2, Lines 12-13) with an inner bulb and an outer bulb surrounding the inner one (Figure 1, Elements 2 and 3). The inner bulb can be filled with a gas and mercury (Column 3, Lines 38-39), made of transparent and translucent materials (Column 2, Lines 47-58), and the inner wall can be coated with phosphor (Column 3, Lines 31-33). Phosphor can be distributed on the surface of the outer bulb (Column 4, Lines 8-10). The outer bulb is made of synthetic translucent resin (Column 2, Lines 14-16). The Hartai reference does not specify the type of phosphor used in the lamp. The Opitz reference teaches a lamp (Column 1, Lines 7-11) with coated phosphors comprised of ZnS:Cu,Au,Al; AnS:Ag; or CaS:Eu (Column 3, Lines 29-33). The coated phosphors are protected against chemical attack and are liquid and readily dispersible (Column 2, Lines 8-9). Thus, it would have been obvious at the time the invention was made to a person having ordinary skills in the art to incorporate the specified coated phosphors, as taught by Opitz, on the outer bulb.

Art Unit: 2879

The recitation "comprising means for generating and maintaining a low-pressure mercury gas discharge" has not been given patentable weight because is considered an intended used recitation. It has been held that a recitation with respect to the manner in which a claimed apparatus is intended to be employed does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations.

In regard to claim 6, the Hartai reference discloses a lamp with the inner bulb being tubular and bent (Figure 1).

In regard to claim 7, the Hartai reference discloses a lamp with the inner bulb being tubular and coiled (Figure 1).
